Attention Parent/Guardian: A bed bug was found in your child’s classroom. Bed bugs are a
nuisance, but their bites are not known to spread disease. Bed bugs are usually active at night.
The bite does not hurt at first, but it may become swollen and itch, much like a mosquito bite.
Watch for clusters of bites, usually in a line, on exposed areas of the body. If you have medical
concerns for you or your child, please contact your physician.

The source of bed bugs often cannot be determined, as bed bugs may be found in many places
including hotels, planes, and movie theaters. Even though it is unlikely for bed bugs to infest a
school, ___________________________ will conduct an inspection and, if needed, will
implement an integrated pest management plan in the area where the bed bug was found.

_________________________ will continue to work to identify bed bugs, provide thorough
inspections of schools, and have licensed pest control specialists assist with pest management.

Contact your physician or school nurse for proper care and treatment of bed bug bites.

If you have any questions regarding bed bugs in your school, please contact the school. If you
have any questions regarding bed bugs found in your home, contact Contracted Services at
904-858-6310.
